About Me

I am an experienced Front-End Developer with over a year of expertise in Angular and a strong focus on software development. I have worked for a product-based firm and have been involved in Industry 4.0 projects. My skills include HTML, CSS, and TypeScript, and I am actively expanding my knowledge in React Native, Node.js, and backend development to become a well-rounded full-stack developer.

I have developed Angular libraries that standardize code and improve project efficiency, enabling me to consistently meet challenging deadlines

Work Experience

BLP Industry.AI | Software Developer

2015 – 2020

I have worked on products for various industries, focusing on improving productivity, performance, and resolving maintenance issues. Additionally, I have developed 15 Angular library components, which have played a key role in standardization and reusability.

Projects

React Native

In my React Native learning journey, I embarked on a project that aimed to digitally transform industries by creating an application to streamline processes such as maintenance, provide insights into production details, and analyze performance.

Built an API using Node.js and MongoDB

As part of my learning journey to become a full-stack developer, I developed a set of APIs using Node.js and MongoDB. This project allowed me to gain hands-on experience in building server-side applications and working with a NoSQL database. By creating these APIs, I enhanced my understanding of the entire web development stack and honed my skills in backend development, API design, and data management.
